

Centre for Alternative Technology

Following on from our trip to the Eco House, we arranged a trip to the Centre for Alternative Technology in West Wales. Here we saw how a community operates in an entirely 'green' way. Examples of houses made from recycled tyres, straw bales and hand made bricks are supported by solar energy, wind and waterpower. The Core Group interviewed workers at the CAT Centre to make an audio presentation available on our website. www.archimedia.org.uk
